

Students with COVID-19 symptoms and/or a positive test who were directed to care for themselves at home may end self-isolation when they have met the following criteria:

- Fever free for 24 hours without the use of fever-reducing medications, **AND**
- Improvement in symptoms, **AND**
- At least 10 days have passed since symptoms first appeared

Students with laboratory-confirmed COVID-19, **who have not had any symptoms,** **may** discontinue self-isolation when at least 10 days have passed since the date of their first positive COVID-19 diagnostic test and have had no subsequent illness.

Students suspected of having COVID-19, who have been tested and receive a **negative test,** may discontinue isolation precautions provided they feel well.

If the student is sick with non-COVID-19 symptoms, or if the person has tested negative for COVID-19, the student must still be symptom free for 24 hours before returning to school. If the student is distance/virtual learning from home, the person does not have to wait 24 hours before resuming school duties.

If a student is in close contact (defined as within 6 feet for 15 minutes) of a confirmed positive and requires isolation, that person may return to school after the 14-day isolation period has passed, if no symptoms develop.

If students present with symptoms of an illness and are seen by their physician they may return sooner with **written clearance** from their physician if the physician determines illness is not COVID-19.
